## INVESTMENT OBJECTIVE

The Boston Trust Asset Management Fund seeks long-term capital growth and income through an actively managed portfolio of stocks, bonds and money market instruments.

## INVESTMENT STRATEGY

The Fund will invest in a diversified portfolio of stocks, bonds and money market instruments, with at least 20% of the Fund's assets invested in each of the following categories: (i) domestic and foreign equity securities, such as common and preferred stock and (ii) fixed income securities, such as U.S. government and agency securities, corporate bonds and money market funds. The Fund may invest in companies of any size, but generally focuses on large capitalization companies. The portion of the Fund invested in equity and fixed income securities will vary based on the Adviser's assessment of the economic and market outlook and the relative attractiveness of stocks, bonds and money market instruments. "Assets" means net assets, plus the amount of borrowing for investment purposes. The Fund will purchase fixed income securities that are primarily rated investment grade, but may invest up to 20% of its total assets in fixed income securities that are considered non-investment grade. The Fund may invest up to 25% of its assets in foreign securities. Shareholders will be given 60 days advance notice of any change to this policy.

**INVESTMENT RISKS**

Stocks (equity securities) are generally more volatile and entail more risk than bonds or money market instruments (collectively called fixed income securities). The net asset value per share of this Fund will fluctuate as the value of the securities in the portfolio changes. Common stocks, and funds investing in common stocks, are expected to provide greater returns over long time periods than fixed income securities. Foreign investing involves risks not typically associated with U.S. investments, including adverse political, social and economic developments and differing auditing and legal standards. Compared to stocks, bonds generally offer a relatively stable level of income. However, like stocks, bonds will fluctuate, thereby incurring the likelihood of principal gain or loss. The Fund is comprised primarily of equity and fixed income securities and is subject to market risk. Stocks may decline due to general market and economic conditions or due to company specific circumstances. Please see the Fund's prospectus for additional information.

**GLOSSARY OF TERMS**

The S&P 500 Index is an unmanaged index that is widely regarded as a gauge of the U.S. equities market. This index includes 500 leading companies in leading industries of the U.S. economy. Although the S&P 500 focuses on the large cap segment of the market, with approximately 75% coverage of U.S. equities, it is a reasonable proxy for the total market.

The Barclays Capital U.S. Government/Credit Bond Index is a non-securitized component of the Barclays U.S. Aggregate Index and was the first macro index launched by Lehman Brothers. The Barclays Capital U.S. Government/Credit Bond Index includes Treasuries (i.e., public obligations of the U.S. Treasury that have remaining maturities of more than one year), Government-Related issues (i.e., agency, sovereign, supranational, and local authority debt), and U.S. dollar denominated corporates.

The 90-Day U.S. Treasury Bill Index reflects monthly return equivalents of yield averages that are not marked to the market. The index is an average of the last three-month Treasury Bill issues. The 3-month Treasury Bills are the short-term debt obligations of the U.S. Government.
